ReStock: Retail Inventory Management

By Yash Tambade | Roll No: 150096725173

Index

1. Problem Statement
2. Our solution: ReStock
3. Working (how it works, step by step)
4. Conclusion

The Problem: Stock Runs Out Unnoticed

Small shops often learn an item is finished only when a customer asks for it.

1

Stockout found too late

Customer asks first, sale is lost

2

Stock checked from memory

Notebooks and guesswork, no one view

3

Reordering is reactive

Buying is not linked to sales

Made for kirana stores,
mini-markets and small
pharmacies

Our Solution: ReStock

ReStock is a simple stock notebook that warns you before items run out.

1 Record stock

Add products and how many you have

2 Track sales

Note each sale, stock updates itself

3 Get alerts

Low and empty items are flagged

4 Reorder fast

Request comes with a suggested amount

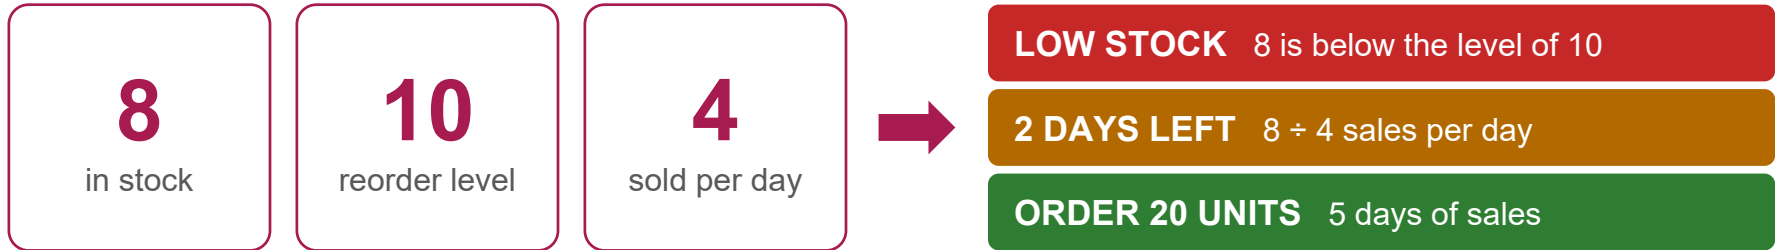

Also inside: suppliers, stock history, reports and AI tips

How It Works: Stock to Reorder

Example: Maggi 70g

Rule: stock 0 = Out, at or below level = Low, else Healthy

Conclusion: Know Before It Runs Out

9 of 9

AI reviewers said the problem is real

12

working pages in our demo prototype

30 days

real-shop pilot is the next step

How ReStock earns: monthly plans

Starter
Free

Up to 30 products

Retail
Rs 299 / month

Up to 500 products

Enterprise
Custom quote

Bigger needs

Takeaway: ReStock shows a shopkeeper what is running low before customers notice.
Next: a real pilot, then smarter forecasting.
